

INTEGRA-ProPack 2.0

Issue Date: July 3rd 2019

Product: INTEGRA-ProPack

Product Version: 2.0

Summary

INTEGRA-ProPack has been updated to support Cylon's new **CBXi** devices, and also non-**INTEGRA** branded hardware. A facility has been added to launch **CXpro^{HD}** directly from **INTEGRA™**.

Background

This update is part of Cylon's continuous-improvement policy, in response to customer feedback.

Features and Installation

Launch CXpro^{HD} from INTEGRA

With the release of the **INTEGRA-ProPack** version 2.0 (`cylonService-rt 2.00`), **CXpro^{HD}** can be launched from **INTEGRA**, opening the associated **site** and device **strategy**. From there you can debug, make strategy changes and download to the controller. See *MAN0140US Cylon INTEGRA-ProPack* and *MAN0133 CXpro^{HD} Users Guide* for more information.

3rd Party Niagara hardware or Supervisors

With the release of the **INTEGRA-ProPack** version 2.0 (`cylonService-rt 2.00`), the tool can be used on non-**INTEGRA** branded hardware and supervisors. This option requires a license based on the number of Cylon controllers and can be purchased through Cylon.

Note: This license is **not** the same as the **Niagara** device and point licenses for the **Niagara** software. The Cylon license should not be set up for more devices than the **Niagara** license covers.

Customer Impact

Customers are advised to update to v 2.0 as soon as convenient.
