# **Cylon® FBXi Series**

# DESCRIPTION

The **FBXi Series** is a range of freely programmable BACnet® Controllers with native BACnet/IP communications support. BTL listed (B-BC) with built in advanced cybersecurity technology and multi-protocol support, the **FBXi** series is ideally suited as integration platform for HVAC equipment and electrical systems including lighting control and metering applications.

With support for up to sixteen FLX (Field Level eXpansion) series extension modules equipped with UniPut technology and dedicated FusionAir Sensor port, the FBXi series provides power and flexibility for complex plant applications. Local override function through HOA switches is available on the -H variants.

For medium sized plants, the **-8R8** variants feature built-in 8 UniPuts™ with Relay and 8 Universal Inputs

# APPLICATION

The **FBXi** Series supports routing of BACnet MS/TP to BACnet/IP or communicates on Modbus TCP and Modbus RTU as clients.

It is designed for a wide range of energy management applications for intelligent control of:

- HVAC equipment such as Central Plant, Boilers, Chillers, Cooling Towers, Pump Systems, Air Handling Units (Constant Volume, Variable Air Volume and Multi-zone), and Rooftop Units,
- Electrical systems such as lighting control, variable frequency drives and metering.

The controller accommodates available pre-engineered strategies or can be tailored to custom applications using CXpro<sup>HD</sup> programming software.

### FLX I/O Expansion Module

(-H variants include Hand/Off/Auto Local Override Function) **FLX-4R4(-H)** 4 UniPuts with Relay, 4 Universal Inputs **FLX-8R8(-H)** 8 UniPuts with Relay, 8 Universal Inputs **FLX 16D**

# **Connectivity for Complex Plants**

### **BACnet/IP communications**

with dual port Ethernet switch (star or daisy chain topology) and support for both DHCP and Static IP

### Network Time Protocol (NTP) support

### Multi-protocol communications support

for BACnet MS/TP, Modbus TCP, Modbus RTU, HTTPS for configuration

### **FusionAir Sensor Port**

Enables IAQ applications using CO<sub>2</sub> and VOC sensors in FusionAir

Touch Free user mobile app

#### Dual IP ports

Supports the Spanning Tree network switch protocol (STP)

#### **Control Capability for Complex Plants**

#### Flexible onboard UniPut technology

allows expandable I/O configurations from 16 to 96 points through connected FLX modules

#### UniPut™

ABB's patented technology that can be configured as analog / digital outputs or analog inputs automatically by the downloaded strategy

#### FLX -H

Local HOA switches provide easy manual override capability for simple checkout and override

#### LED status on all I/O channels

provides indication of fault or override status

#### **Compact form factor for Medium Complexity**

-8R8 and 8R8-H versions with built in FLX control points for medium complexity plant applications

Note (1) : UniPuts are software configurable for point types AI, DI, AO or DO-R.

Note (2) : FBXi supports a maximum of 640 Modbus point (FBXi-X256), 450 Modbus point (FBXi-8R8(-H)-X96), 320 Modbus points (FBXi-X48) which can be a combination of Modbus RTU or TCP.

Note (3) : The controller supports different protocols on the two RS485 ports at the same time. Each RS-485 Port supports one communication protocol at a time.

Note: FBXi acts only as a Modbus Client for Modbus TCP communications, and only as a Modbus Master for Modbus RTU communications.

Note: Routing of Modbus RTU to Modbus TCP via strategies in CXpro<sup>HD</sup>

 Notes:
 1) All inputs and outputs are protected against short circuit, as well as over-voltage up to 24 V AC.

 2) Inputs use on-board 16-bit analog to digital convertor.

 3) 18 V DC supply, max 60 mA per FBXi unit, is available for powering sensors.
